# CHAMPIONSHIP TECHNICAL BULLETIN 2008 - #1

Dear Radical Owner/Driver

After extensive testing with Dunlop some improvements will be brought into use in 2008 for the following cars:

**SR8, SR5, SR3**

The above cars will run on a new 257 compound which will replace the 674's and the harder 376's.

The new compound is closer to 376 in grade and is therefore more durable than 674.

Also a new construction – C29D will be supplied for front tyres on the above cars. This has the benefit of improving the wear and feel characteristics of these cars as the front downforce has increased year-on-year.

All SR4's, Prosports, PR6's and Clubsports will remain on 662 compound tyres.
